WHAT THE FIGURES MEAN

1-- The studies are based on the "effective top" of each horse at the time of the race being measured. Effective top is defined here as the horse's best figure from his last six starts, or last 12 months if he ran less than 6 times during that period. This means for example that when we look at an instance of a trainer running a horse second off a layoff, that effort is compared to his previous 6 runs at that time.

2-- The efforts being measured are broken out into 4 categories:

- a) "new top", defined as more than one point better than the previous "top";
- b) "pair", defined as within a point better or worse than the previous top;
- c) "off race", defined as a point or more worse but less than 4 points worse than the previous top;

d) "x", defined as 4 or more points worse than the previous top.

3-- For the categories measuring how a trainer's horses do after a top, pair of tops etc., we used only horses that had run at least 3 times for the trainer.

4-- We did not use a sequence where there was a trainer change in the last 6 starts (except for the "trainer change" studies).

5-- The bold face and italics indicate significantly higher or lower than average, respectively, not better or worse. Meaning, a trainer with a bold face "x" group in a category is getting more BAD performances than most.

6-- We compared efforts to tops on the same surface only - if a horse raced on dirt we compared his effort to his best dirt number within his last 6 starts on any surface.

WHAT THE FIGURES MEAN

1-- The studies are based on the "effective top" of each horse at the time of the race being measured. Effective top is defined here as the horse's best figure from his last six starts, or last 12 months if he ran less than 6 times during that period. This means for example that when we look at an instance of a trainer running a horse second off a layoff, that effort is compared to his previous 6 runs at that time.

2-- The efforts being measured are broken out into 4 categories:

- a) "new top", defined as more than one point better than the previous "top";
- b) "pair", defined as within a point better or worse than the previous top;
- c) "off race", defined as a point or more worse but less than 4 points worse than the previous top;

d) "x", defined as 4 or more points worse than the previous top.

3-- For the categories measuring how a trainer's horses do after a top, pair of tops etc., we used only horses that had run at least 3 times for the trainer.

4-- We did not use a sequence where there was a trainer change in the last 6 starts (except for the "trainer change" studies).

5-- The bold face and italics indicate significantly higher or lower than average, respectively, not better or worse. Meaning, a trainer with a bold face "x" group in a category is getting more BAD performances than most.

6-- We compared efforts to tops on the same surface only - if a horse raced on dirt we compared his effort to his best dirt number within his last 6 starts on any surface.

King, Barry L.**WHAT THE FIGURES MEAN**

1-- The studies are based on the "effective top" of each horse at the time of the race being measured. Effective top is defined here as the horse's best figure from his last six starts, or last 12 months if he ran less than 6 times during that period. This means for example that when we look at an instance of a trainer running a horse second off a layoff, that effort is compared to his previous 6 runs at that time.

2-- The efforts being measured are broken out into 4 categories:

- a) "new top", defined as more than one point better than the previous "top";
- b) "pair", defined as within a point better or worse than the previous top;
- c) "off race", defined as a point or more worse but less than 4 points worse than the previous top;

d) "x", defined as 4 or more points worse than the previous top.

3-- For the categories measuring how a trainer's horses do after a top, pair of tops etc., we used only horses that had run at least 3 times for the trainer.

4-- We did not use a sequence where there was a trainer change in the last 6 starts (except for the "trainer change" studies).

5-- The bold face and italics indicate significantly higher or lower than average, respectively, not better or worse. Meaning, a trainer with a bold face "x" group in a category is getting more BAD performances than most.

6-- We compared efforts to tops on the same surface only - if a horse raced on dirt we compared his effort to his best dirt number within his last 6 starts on any surface.

WHAT THE FIGURES MEAN

1-- The studies are based on the "effective top" of each horse at the time of the race being measured. Effective top is defined here as the horse's best figure from his last six starts, or last 12 months if he ran less than 6 times during that period. This means for example that when we look at an instance of a trainer running a horse second off a layoff, that effort is compared to his previous 6 runs at that time.

2-- The efforts being measured are broken out into 4 categories:

- a) "new top", defined as more than one point better than the previous "top";
- b) "pair", defined as within a point better or worse than the previous top;
- c) "off race", defined as a point or more worse but less than 4 points worse than the previous top;

d) "x", defined as 4 or more points worse than the previous top.

3-- For the categories measuring how a trainer's horses do after a top, pair of tops etc., we used only horses that had run at least 3 times for the trainer.

4-- We did not use a sequence where there was a trainer change in the last 6 starts (except for the "trainer change" studies).

5-- The bold face and italics indicate significantly higher or lower than average, respectively, not better or worse. Meaning, a trainer with a bold face "x" group in a category is getting more BAD performances than most.

6-- We compared efforts to tops on the same surface only - if a horse raced on dirt we compared his effort to his best dirt number within his last 6 starts on any surface.

Stewart, Dallas**Mott, William I.****Vaccarezza, Carlo****Amoss, Thomas M.****WHAT THE FIGURES MEAN**

1-- The studies are based on the "effective top" of each horse at the time of the race being measured. Effective top is defined here as the horse's best figure from his last six starts, or last 12 months if he ran less than 6 times during that period. This means for example that when we look at an instance of a trainer running a horse second off a layoff, that effort is compared to his previous 6 runs at that time.

2-- The efforts being measured are broken out into 4 categories:

- a) "new top", defined as more than one point better than the previous "top";
- b) "pair", defined as within a point better or worse than the previous top;
- c) "off race", defined as a point or more worse but less than 4 points worse than the previous top;

d) "x", defined as 4 or more points worse than the previous top.

3-- For the categories measuring how a trainer's horses do after a top, pair of tops etc., we used only horses that had run at least 3 times for the trainer.

4-- We did not use a sequence where there was a trainer change in the last 6 starts (except for the "trainer change" studies).

5-- The bold face and italics indicate significantly higher or lower than average, respectively, not better or worse. Meaning, a trainer with a bold face "x" group in a category is getting more BAD performances than most.

6-- We compared efforts to tops on the same surface only - if a horse raced on dirt we compared his effort to his best dirt number within his last 6 starts on any surface.

WHAT THE FIGURES MEAN

1-- The studies are based on the "effective top" of each horse at the time of the race being measured. Effective top is defined here as the horse's best figure from his last six starts, or last 12 months if he ran less than 6 times during that period. This means for example that when we look at an instance of a trainer running a horse second off a layoff, that effort is compared to his previous 6 runs at that time.

2-- The efforts being measured are broken out into 4 categories:

- a) "new top", defined as more than one point better than the previous "top";
- b) "pair", defined as within a point better or worse than the previous top;
- c) "off race", defined as a point or more worse but less than 4 points worse than the previous top;

d) "x", defined as 4 or more points worse than the previous top.

3-- For the categories measuring how a trainer's horses do after a top, pair of tops etc., we used only horses that had run at least 3 times for the trainer.

4-- We did not use a sequence where there was a trainer change in the last 6 starts (except for the "trainer change" studies).

5-- The bold face and italics indicate significantly higher or lower than average, respectively, not better or worse. Meaning, a trainer with a bold face "x" group in a category is getting more BAD performances than most.

6-- We compared efforts to tops on the same surface only - if a horse raced on dirt we compared his effort to his best dirt number within his last 6 starts on any surface.

WHAT THE FIGURES MEAN

1-- The studies are based on the "effective top" of each horse at the time of the race being measured. Effective top is defined here as the horse's best figure from his last six starts, or last 12 months if he ran less than 6 times during that period. This means for example that when we look at an instance of a trainer running a horse second off a layoff, that effort is compared to his previous 6 runs at that time.

2-- The efforts being measured are broken out into 4 categories:

- a) "new top", defined as more than one point better than the previous "top";
- b) "pair", defined as within a point better or worse than the previous top;
- c) "off race", defined as a point or more worse but less than 4 points worse than the previous top;

d) "x", defined as 4 or more points worse than the previous top.

3-- For the categories measuring how a trainer's horses do after a top, pair of tops etc., we used only horses that had run at least 3 times for the trainer.

4-- We did not use a sequence where there was a trainer change in the last 6 starts (except for the "trainer change" studies).

5-- The bold face and italics indicate significantly higher or lower than average, respectively, not better or worse. Meaning, a trainer with a bold face "x" group in a category is getting more BAD performances than most.

6-- We compared efforts to tops on the same surface only - if a horse raced on dirt we compared his effort to his best dirt number within his last 6 starts on any surface.

Amoss, Thomas M.**WHAT THE FIGURES MEAN**

1-- The studies are based on the "effective top" of each horse at the time of the race being measured. Effective top is defined here as the horse's best figure from his last six starts, or last 12 months if he ran less than 6 times during that period. This means for example that when we look at an instance of a trainer running a horse second off a layoff, that effort is compared to his previous 6 runs at that time.

2-- The efforts being measured are broken out into 4 categories:

- a) "new top", defined as more than one point better than the previous "top";
- b) "pair", defined as within a point better or worse than the previous top;
- c) "off race", defined as a point or more worse but less than 4 points worse than the previous top;

d) "x", defined as 4 or more points worse than the previous top.

3-- For the categories measuring how a trainer's horses do after a top, pair of tops etc., we used only horses that had run at least 3 times for the trainer.

4-- We did not use a sequence where there was a trainer change in the last 6 starts (except for the "trainer change" studies).

5-- The bold face and italics indicate significantly higher or lower than average, respectively, not better or worse. Meaning, a trainer with a bold face "x" group in a category is getting more BAD performances than most.

6-- We compared efforts to tops on the same surface only - if a horse raced on dirt we compared his effort to his best dirt number within his last 6 starts on any surface.

Oliver, Victoria H.**WHAT THE FIGURES MEAN**

1-- The studies are based on the "effective top" of each horse at the time of the race being measured. Effective top is defined here as the horse's best figure from his last six starts, or last 12 months if he ran less than 6 times during that period. This means for example that when we look at an instance of a trainer running a horse second off a layoff, that effort is compared to his previous 6 runs at that time.

2-- The efforts being measured are broken out into 4 categories:

- a) "new top", defined as more than one point better than the previous "top";
- b) "pair", defined as within a point better or worse than the previous top;
- c) "off race", defined as a point or more worse but less than 4 points worse than the previous top;

d) "x", defined as 4 or more points worse than the previous top.

3-- For the categories measuring how a trainer's horses do after a top, pair of tops etc., we used only horses that had run at least 3 times for the trainer.

4-- We did not use a sequence where there was a trainer change in the last 6 starts (except for the "trainer change" studies).

5-- The bold face and italics indicate significantly higher or lower than average, respectively, not better or worse. Meaning, a trainer with a bold face "x" group in a category is getting more BAD performances than most.

6-- We compared efforts to tops on the same surface only - if a horse raced on dirt we compared his effort to his best dirt number within his last 6 starts on any surface.

Brown, Chad C.**WHAT THE FIGURES MEAN**

1-- The studies are based on the "effective top" of each horse at the time of the race being measured. Effective top is defined here as the horse's best figure from his last six starts, or last 12 months if he ran less than 6 times during that period. This means for example that when we look at an instance of a trainer running a horse second off a layoff, that effort is compared to his previous 6 runs at that time.

2-- The efforts being measured are broken out into 4 categories:

- a) "new top", defined as more than one point better than the previous "top";
- b) "pair", defined as within a point better or worse than the previous top;
- c) "off race", defined as a point or more worse but less than 4 points worse than the previous top;

d) "x", defined as 4 or more points worse than the previous top.

3-- For the categories measuring how a trainer's horses do after a top, pair of tops etc., we used only horses that had run at least 3 times for the trainer.

4-- We did not use a sequence where there was a trainer change in the last 6 starts (except for the "trainer change" studies).

5-- The bold face and italics indicate significantly higher or lower than average, respectively, not better or worse. Meaning, a trainer with a bold face "x" group in a category is getting more BAD performances than most.

6-- We compared efforts to tops on the same surface only - if a horse raced on dirt we compared his effort to his best dirt number within his last 6 starts on any surface.

WHAT THE FIGURES MEAN

1-- The studies are based on the "effective top" of each horse at the time of the race being measured. Effective top is defined here as the horse's best figure from his last six starts, or last 12 months if he ran less than 6 times during that period. This means for example that when we look at an instance of a trainer running a horse second off a layoff, that effort is compared to his previous 6 runs at that time.

2-- The efforts being measured are broken out into 4 categories:

- a) "new top", defined as more than one point better than the previous "top";
- b) "pair", defined as within a point better or worse than the previous top;
- c) "off race", defined as a point or more worse but less than 4 points worse than the previous top;

d) "x", defined as 4 or more points worse than the previous top.

3-- For the categories measuring how a trainer's horses do after a top, pair of tops etc., we used only horses that had run at least 3 times for the trainer.

4-- We did not use a sequence where there was a trainer change in the last 6 starts (except for the "trainer change" studies).

5-- The bold face and italics indicate significantly higher or lower than average, respectively, not better or worse. Meaning, a trainer with a bold face "x" group in a category is getting more BAD performances than most.

6-- We compared efforts to tops on the same surface only - if a horse raced on dirt we compared his effort to his best dirt number within his last 6 starts on any surface.

WHAT THE FIGURES MEAN

1-- The studies are based on the "effective top" of each horse at the time of the race being measured. Effective top is defined here as the horse's best figure from his last six starts, or last 12 months if he ran less than 6 times during that period. This means for example that when we look at an instance of a trainer running a horse second off a layoff, that effort is compared to his previous 6 runs at that time.

2-- The efforts being measured are broken out into 4 categories:

- a) "new top", defined as more than one point better than the previous "top";
- b) "pair", defined as within a point better or worse than the previous top;
- c) "off race", defined as a point or more worse but less than 4 points worse than the previous top;

d) "x", defined as 4 or more points worse than the previous top.

3-- For the categories measuring how a trainer's horses do after a top, pair of tops etc., we used only horses that had run at least 3 times for the trainer.

4-- We did not use a sequence where there was a trainer change in the last 6 starts (except for the "trainer change" studies).

5-- The bold face and italics indicate significantly higher or lower than average, respectively, not better or worse. Meaning, a trainer with a bold face "x" group in a category is getting more BAD performances than most.

6-- We compared efforts to tops on the same surface only - if a horse raced on dirt we compared his effort to his best dirt number within his last 6 starts on any surface.

WHAT THE FIGURES MEAN

1-- The studies are based on the "effective top" of each horse at the time of the race being measured. Effective top is defined here as the horse's best figure from his last six starts, or last 12 months if he ran less than 6 times during that period. This means for example that when we look at an instance of a trainer running a horse second off a layoff, that effort is compared to his previous 6 runs at that time.

2-- The efforts being measured are broken out into 4 categories:

- a) "new top", defined as more than one point better than the previous "top";
- b) "pair", defined as within a point better or worse than the previous top;
- c) "off race", defined as a point or more worse but less than 4 points worse than the previous top;

d) "x", defined as 4 or more points worse than the previous top.

3-- For the categories measuring how a trainer's horses do after a top, pair of tops etc., we used only horses that had run at least 3 times for the trainer.

4-- We did not use a sequence where there was a trainer change in the last 6 starts (except for the "trainer change" studies).

5-- The bold face and italics indicate significantly higher or lower than average, respectively, not better or worse. Meaning, a trainer with a bold face "x" group in a category is getting more BAD performances than most.

6-- We compared efforts to tops on the same surface only - if a horse raced on dirt we compared his effort to his best dirt number within his last 6 starts on any surface.

THORO-GRAPH RACE SHAPES

We have taken the first quarter mile run by every horse in their recent races, and adjusted each horse's time for track speed, wind, weight, carried, and ground loss, if any. We then gather the data for all the horses running on a race card, and further adjust those times based on the recent speed of the track they are running over today. The resulting adjusted quarter times give the handicapper the ability to form an idea of the early speed of each horse, and the early pace of each race.

We then take things a step further. Using each horse's last three adjusted times, we have come up with an average quarter mile time for each horse, and put those times on a graph for each race. The result is what we call a Race Shape—a rough evaluation of where each horse figures to be after a quarter mile. This enables the handicapper to evaluate how a race will set up—for example, whether a horse drawn outside has several horses with a similar running style inside him, in which case he could be caught wide.

Keep in mind that how much early speed a horse has shown in previous races is often a function of tactics—that's why we are using an average for the Race Shapes. It's also why we separately show all the recent adjusted quarter times for each horse—so you, the handicapper, can decide what information is relevant to today's race. Also keep in mind that how much speed a horse shows today can be a function of tactics—trainers and jockeys handicap too.
